

## CITY OF CHANUTE, KANSAS Transparency Disclosure

### Overview:

Beginning June 11, 2018, all internet service providers (“ISPs”) are required to publicly disclose information about the network management practices, performance characteristics, and commercial terms of their broadband Internet services in one of two ways: x By providing disclosures on publicly available, easily accessible websites of their choosing x By submitting them to the Federal Communications Commission (“FCC”) for posting.

City of Chanute, Kansas (“CITY OF CHANUTE”) has elected to post our Internet Transparency Disclosure on our website at [www.chanute.org/fiber/resources](http://www.chanute.org/fiber/resources)

### Required Public Disclosures:

#### NETWORK MANAGEMENT PRACTICES

##### **Blocking**

Any practice (other than reasonable network management elsewhere disclosed) that blocks or otherwise prevents end user access to lawful content, applications, service, or non-harmful devices, including a description of what is blocked.

**City of Chanute does not block access to lawful content.**

##### **Throttling**

Any practice (other than reasonable network management elsewhere disclosed) that degrades or impairs access to lawful internet traffic on the basis of content, application, service, user, or use of a non-harmful device, including a description of what is throttled.

**City of Chanute does not intentionally degrade or impair access to lawful internet traffic.**

##### **Affiliated Prioritization**

Any practice that directly or indirectly favors some traffic over other traffic, including through use of techniques such as traffic shaping, prioritization, or resource reservation, to benefit an affiliate, including identification of the affiliate.

**City of Chanute does not favor any traffic over other traffic.**

##### **Paid Prioritization**

Any practice that directly or indirectly favors some traffic over other traffic, including through use of techniques such as traffic shaping, prioritization, or resource reservation, in exchange for consideration, monetary or otherwise.

**City of Chanute does not engage in paid prioritization.**

## **Congestion Management**

This section describes any congestion management practices undertaken by City of Chanute. These descriptions include types of traffic subject to the practices; the purposes served by the practices; the practices' effects on the end users' experience; criteria used in practices, such as indicators of congestion that trigger a practice, including any usage limits triggering the practice, and the typical frequency of congestion; usage limits and the consequences of exceeding them; and references to engineering standards, where appropriate.

**City of Chanute monitors and proactively reinforces our network with additional capacity in areas where growth trends identify a need. If network congestion occurs, City of Chanute employs various techniques to ensure a positive customer experience and fair distribution of network resources.**

## **Application Specific Behavior**

In this section, we are asked whether and why we might block or rate-control specific protocols or protocol ports, modify protocol fields in ways not prescribed by the protocol standard, or otherwise inhibit or favor certain applications or classes of applications.

**City of Chanute Internet customers receive full access to all of the lawful content, services, and applications that the internet has to offer.**

**City of Chanute does not otherwise block, prioritize, or degrade any internet sourced or destined traffic based on application, source, destination, protocol, or port unless it does so in connection with a security practice described in the Terms of Service and Acceptable Use Policy.**

## **Device Attachment Rules**

City of Chanute is asked to detail any restrictions on the types of devices and any approval procedures for devices to connect to the network.

**City of Chanute customers may attach devices of their choice to the City of Chanute provided Optical Network Terminal. Any attached devices must be used in a manner consistent with our Terms of Service and Acceptable Use Policy.**

## **Security**

Any practices used to ensure end-user security or security of the network, including types of triggering conditions that cause a mechanism to be invoked (but excluding information that could reasonably be used to circumvent network security).

**City of Chanute engineers are dedicated to managing our network to ensure that all customers receive the most secure online experience.**

**When malicious behavior is identified, City of Chanute engineers employ various techniques to help provide a positive customer experience. Our security management techniques include ensuring that customer systems are not propagating viruses, distributing spam email, or engaging in other malicious behavior.**

For more information related to network security, please review our “Acceptable Internet Use Policy” found under Internet Policies on our website at [www.chanute.org/fiber/resources](http://www.chanute.org/fiber/resources)

## PERFORMANCE CHARACTERISTICS

### Service Description

A general description of the service, including the service technology, expected and actual access speed and latency, and the suitability of the service for real-time applications.

**High speed internet service is provided via two (2) 1 gigabit, geographically diversified, fiber connections from CenturyLink and Cox Communications. Latency to City of Chanute backbone providers are between 10ms and 18ms.**

**G-PON Fiber-To-The-Home/Premise technologies are utilized to deliver service to the end user premise (customer). City of Chanute provisions the Optical Network equipment to account for approximately 5% of overhead on the customer’s fiber in order to achieve the published Tier-Speed with the exception of 1Gbps services. Under normal circumstances, a customer should expect to receive the speed of the service-tier purchased. Latency on City of Chanute’s network is less than 6ms.**

The "actual" speed that a customer will experience while using the Internet depends upon a variety of conditions, many of which are beyond the control of an ISP such as City of Chanute. These conditions include:

- 1 Performance of a customer's computer, including its age, processing capability, operating system, the number of applications running simultaneously, and the presence of any adware and viruses.**
- 2 Type of connection between a customer's computer and modem. For example, wireless connections may be slower than direct connections into a router or modem. Wireless connections also may be subject to greater fluctuations, interference and congestion. City of Chanute does not recommend wireless modem connections for use with its higher speed tiers as many wireless connections do not perform at the speeds delivered by these tiers.**
- 3 The distance packets travel (round trip time of packets) between a customer's computer and its final destination on the internet, including the number and quality of the networks of various operators in the transmission path. The internet is a "network of networks." A customer's connection may traverse the networks of multiple providers before reaching its destination, and the limitations of those networks will most likely affect the overall speed of that Internet connection.**
- 4 Congestion or high usage levels at the website or destination. If a large number of visitors are accessing a site or particular destination at the same time, your connection will be affected if the site or destination does not have sufficient capacity to serve all of the visitors efficiently.**
- 5 Gating of speeds or access by the website or destination. In order to control traffic or**

performance, many websites limit the speeds at which a visitor can download from their site. Those limitations will carry through to a customer's connection.

- 6 The performance of a subscriber-owned router installed. Equipment performance may degrade over time, and certain devices are not capable of handling higher speeds.
- 7 Latency is another measurement of internet performance. Latency is the time delay in transmitting or receiving packets on a network. Latency is primarily a function of the distance between two points of transmission, but also can be affected by the quality of the network or networks used in transmission. Latency is typically measured in milliseconds, and generally has no significant impact on typical everyday internet usage. As latency varies based on any number of factors, most importantly the distance between a customer's computer and the ultimate internet destination (as well as the number and variety of networks your packets cross), it is not possible to provide customers with a single figure that will define latency as part of a user experience.

#### Impact of Non-Broadband Internet Access Service Data Services

City of Chanute is asked what non-broadband Internet access service data services, if any, are offered to end-users, and whether and how any non-broadband Internet access service data services may affect the last-mile capacity available for, and the performance of, broadband Internet access service.

**The City of Chanute currently offers internet service only.**

#### COMMERCIAL TERMS

##### Price

Information as to pricing may be found under Our Services at [www.chanute.org/fiber/resources](http://www.chanute.org/fiber/resources)  
City of Chanute has no usage fees. Additional information can be found on under Internet Policies on our website at [www.chanute.org/fiber/resources](http://www.chanute.org/fiber/resources)

Guaranteed large bandwidth Institutional Ethernet customers: (Priced individually)

Fiber Connectivity Ethernet (Where available) Small Customer	\$250.00/month
Up to 1 Gbps of Internet	\$149.00/Month

Static Addressing

Downtown GPON (shared fiber up to 1 Gbps) (Where available)	\$129.00/Month
Dynamic Addressing	
Static Addressing (1-IP Address)	

GPON (shared fiber up to 1 Gbps) (Where available)	\$200.00/Month
Dynamic Addressing	
Static Addressing (1-IP Address)	

Wireless WiMax Connectivity (Where available)	\$ 30.00/Month
---	----------------

Up to 15 Mbps Internet

Additional IP Address (Each) \$ 2.00/Month

MPLS/Frame Relay Connection Priced Individually

Virus and Spam Screening through the City's Barracuda \$ 50.00/domain/month\*

- For up to 4 Mailboxes/Domain, \$5/Month/Additional Mailbox

Collocation space rental (with fiber connectivity) Priced Individually

(With other connectivity) Priced Individually

**Privacy Policies** Our privacy policy can be found at [www.chanute.org/fiber/resources](http://www.chanute.org/fiber/resources)

**Redress Options** Please contact City of Chanute at 620-431-5200 to discuss any issues or concerns. Our office hours are 8:00 AM – 5:00 PM Monday – Friday. Problems after hours contact 620-431-5270.
